

NEIGHBORHOOD NOTICE

Dear Resident:

Resource Environmental L.L.C. (RELLC), an environmental management company, has been required and directed by the New York State Department of Environmental Conservation (NYSDEC) to perform drilling and monitor well installation activities at certain locations on Parkway Drive. This drilling activity will be performed by AECOM, RELLC's contractor, under the direction of the NYSDEC. This work is part of an ongoing effort to monitor groundwater potentially impacted by historic leaks at two former gasoline stations at the corner of Old Country Road and Plainview Road. It's important to note that there are no human health impacts related to the potentially impacted aquifer. We are evaluating groundwater conditions at 365 to 500 feet below the ground surface. There is no health concern at or near the surface for any residential properties in the area.

Permits have been granted by the Town of Oyster Bay to install two monitoring wells. One location is well number WN-23 near Bluebird Lane, near previously installed locations. The second is for well number WN-24 near Lombardi Place. Drilling activities will consist of one monitoring well being drilled at each location in the grassy strip adjacent to the curb line on Parkway Drive (please see the attached map for approximate locations). The installation activities will begin at WN-23 on July 24, 2023 and will move to WN-24 after WN-23 is completed. Installation activities at WN-24 are anticipated to begin during the week of August 14-18, 2023. The start date for WN-24 will be dependent on the end date of WN-23 work.

Well installation activities are anticipated to take about 15-17 business days at each location and will take place in July and August 2023. All of the work will be conducted between Monday and Friday, 8 a.m. and 6 p.m. and is being scheduled to minimize traffic issues and inconvenience to residents and disruption of the neighborhood. We appreciate your patience and understanding in this important undertaking and apologize in advance for any inconvenience.

Due to the nature of the heavy equipment needed to drill the wells, it may be noisy at times in the immediate area of the drilling site. Traffic control will be conducted as needed and the work area will be secured. Any damage to the grass or sidewalk caused by the well installation will be repaired in a timely fashion once work is completed. If there are any special concerns or issues that you are aware of, please let us know.

Who Can I Call with Questions?

For questions regarding drilling necessity and groundwater regulatory issues, you may contact the New York State Department of Environmental Conservation case manager Matt Egli at 1-631-444-0323 (office).

For questions or issues regarding drilling and the groundwater investigation itself, please contact Megan Dascoli, AECOM, at 1-908-623-0145 (cell).

You may also contact Greg Vogelwohl, RELLC, at 1-805-286-4076 (office). For more information concerning RELLC, the company's website is at (www.rellc.net).
